

# Warehouse Analyser 2011

Creating Value in Warehouse Planning and Performance

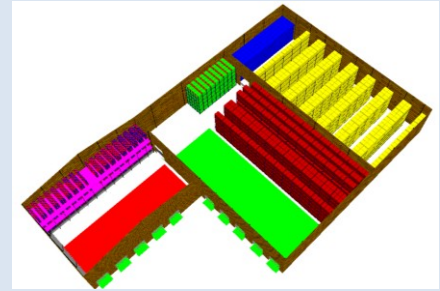

**“Using predefined profiles show all the information you need with just one-button-click”**

## Warehouse profiling is a must for operational change and improvements

Warehouse Analyser 2011 consists of an extensive set of predefined profiles. These refer to order composition, item quantities, inventory levels and activity planning in the warehouse.

- Family mix distribution
- Full/partial pallet mix distribution
- Full/broken carton mix distribution
- Pallet order growth distribution
- Case order growth distribution
- Lines per order distribution
- Lines and cube per order distributions
- Lines and cube per receipt distribution
- Lines and cube per receipt distribution
- Popularity distribution
- Popularity-volume distribution
- Article-order completion distribution
- Pallet/carton inventory distribution
- Seasonality distribution
- Daily activity distribution

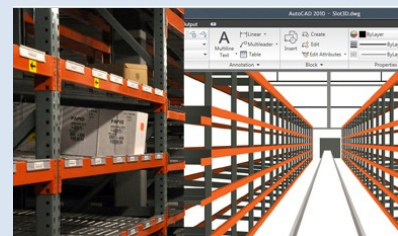

Starting with defining the overall warehouse lay-out (warehouse-in-warehouse principle) ...

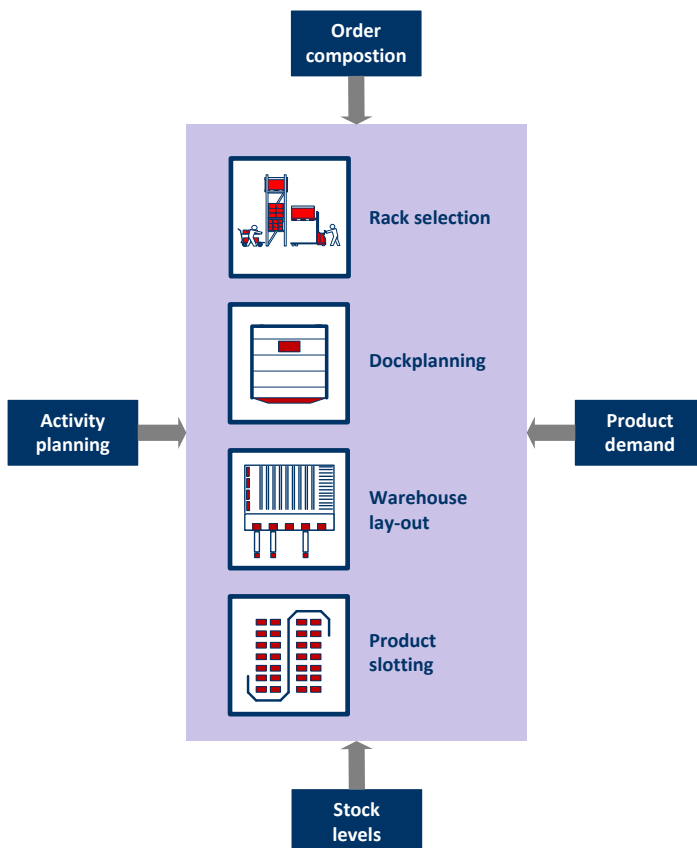

... designing storage modes, types of handling systems and required resources ...

... towards detailed slotting and planning criteria per storage mode ...

... in order to get highly cost-effective routing and stockkeeping results and performances!

Creating Value in Warehouse Planning and Performance

# Warehouse Analyser 2011
